

MIXED SIGNALS FROM OCTOBER FIGURES

➤ IFR MOVEMENTS: OCTOBER 2009 VS. OCTOBER 2008

The majority of CANSO Members ANSPs have reported that they controlled fewer movements in October 2009 than in the same month last year.

However, the picture is mixed, with Hellenic CAA showing a return to growth of more than 2%, and of the larger European ANSPs, ENAV showed a decline of just 2.5% while Northern European providers continue to be hit hard.

Perhaps significantly for the Asia-Pacific, CAAS recorded strong growth of nearly 6.7%, raising hopes that the aviation sector in the region may be returning to health.
